About Onursan

Founded in 2011, Onursan Metal Industries is a Türkiye based manufacturer with 2 factories specializing in automotive brake pad backing plates and related precision metal components.

Our İzmir facility operates in a 5,000 m² production area, while our new Bergama facility currently provides 5,000 m² of production space with expansion potential up to 12,000 m².

With fine blanking capability, ISO 9001:2015 certification by TÜV Austria and an export-oriented growth vision, Onursan aims to become a reliable long-term manufacturing partner for international brake pad and aftermarket companies.

Export-Oriented Bergama Facility

Western Anatolian Free Zone

Onursan's Bergama facility operates within the Western Anatolian Free Zone, also known as BASBAŞ. As Türkiye's 19th and İzmir's 3rd officially designated free zone, BASBAŞ offers a modern industrial base designed to support export-oriented manufacturers seeking faster, more cost-efficient access to European and global markets.

Spanning 2.5 million square metres of industrial land, the zone strengthens Onursan's ability to serve international customers with a more flexible, logistics-friendly and trade-efficient production structure.

Key advantages for export customers:

- Free zone production base for international trade
- Potential customs, VAT and duty-related advantages depending on applicable legislation
- Simplified import/export procedures
- Strategic access to Aegean ports, highways and global transport routes
- Closer and more responsive supply alternative for Europe, MENA and regional markets
- Export-focused production capacity for long-term cooperation

5,000 m² Production Area

Expandable up to 12,000 m²

Why Work With Onursan

- **Closer to Europe & Regional Markets**

Truck shipments can reach Central Europe in approximately 3–4 days via the 1915 Çanakkale Bridge, while sea freight options from Aliğa Bay support access to Northern Europe and the Mediterranean. Shorter lead times, lower freight complexity and a supply chain you can visit.

- **Specialized in Backing Plates**

Since 2011, brake pad backing plates have been our core production focus. We serve commercial vehicle, heavy-duty and aftermarket applications with multiple reference geometries. No learning curve. No divided attention.

- **Fine Blanking Advantage**

Our fine blanking capability supports tighter tolerances, cleaner sheared edges and improved flatness in a single operation, reducing the need for secondary finishing steps that may add cost, variation and quality risk.

- **Export-Oriented Facility**

Our Bergama facility operates within BASBAŞ, İzmir's Western Anatolian Free Zone, with simplified customs procedures, logistics infrastructure and potential tax-related advantages depending on applicable free zone legislation.

- **Flexible Cooperation**

We work from customer drawings, physical samples or technical specifications. From prototype development to serial production, our process is structured to match your qualification timeline.

- **Built for Long-Term Partnership**

With a single product-category focus and over a decade of continuous operation, Onursan is built for long-term cooperation. Our customer relationships are measured in years, not transactions.

Manufacturing Capabilities

Focused manufacturing for brake pad backing plates.

Onursan combines backing plate production experience, fine blank capability and customer specific project handling to support international brake pad and aftermarket companies.

From technical drawing review and sample based manufacturing to tooling preparation and serial production, our process is designed to deliver consistency, repeatability and reliable supply performance.

Key strengths;

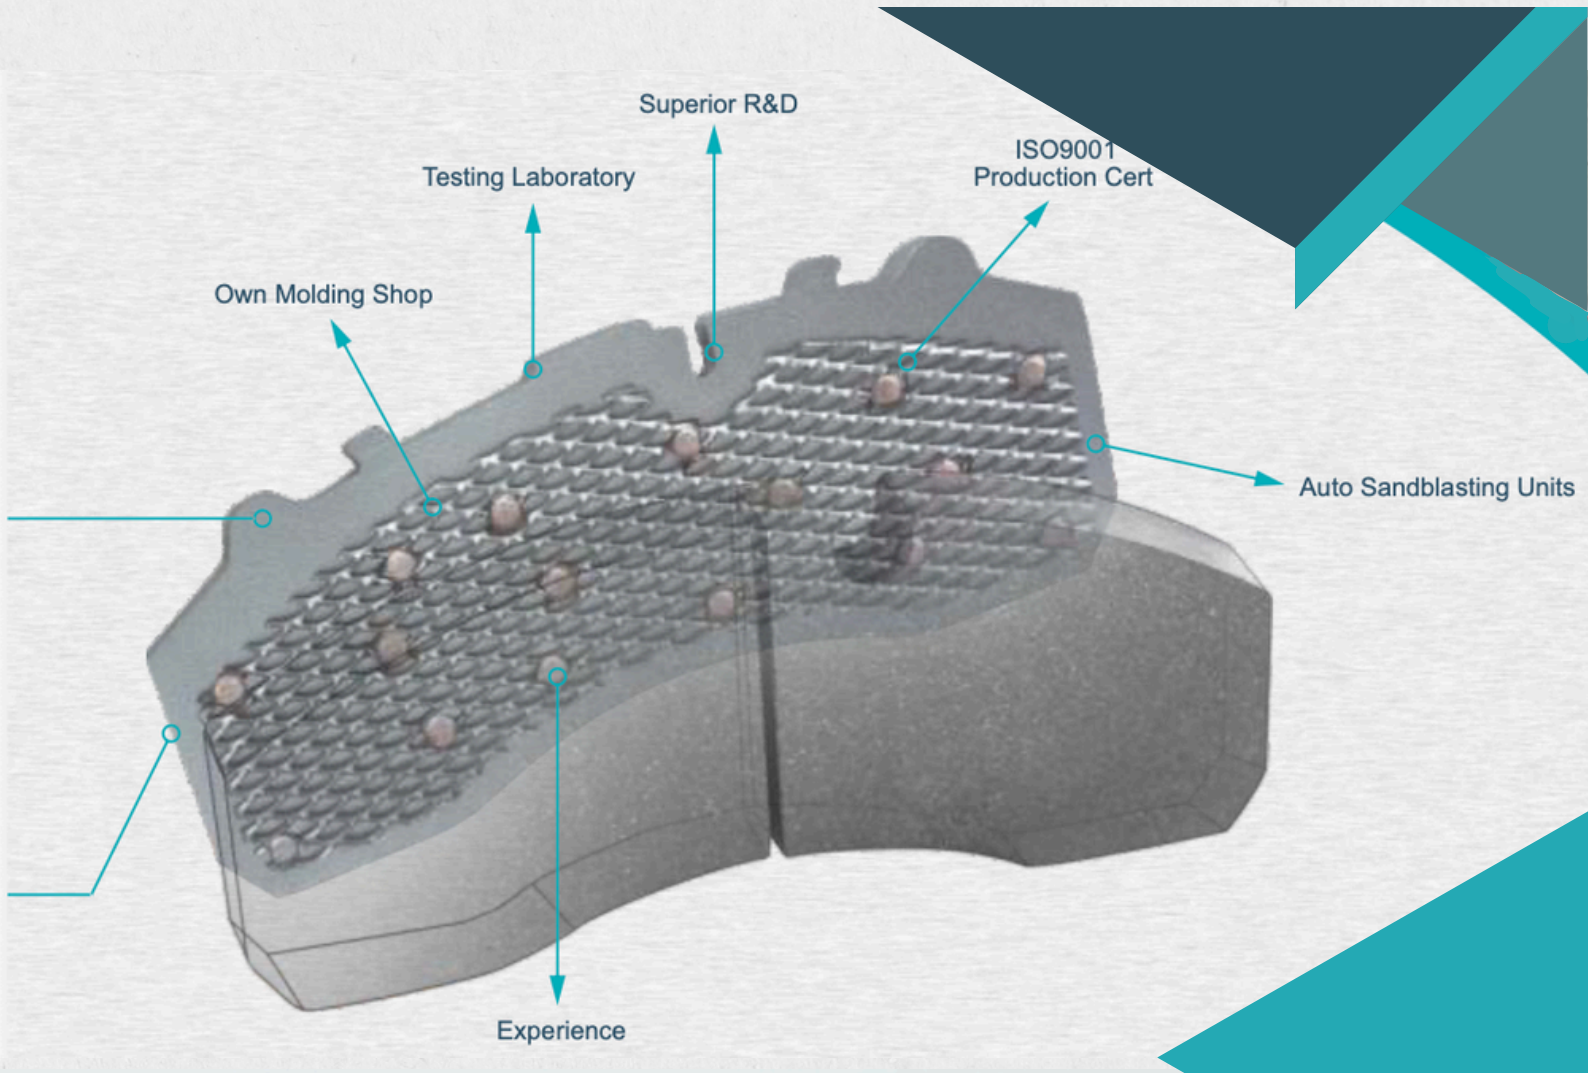

- Brake pad backing plate specialization
- Fine blanking technology
- Cleaner edge and flatness capability
- Export-oriented serial manufacturing
- Stamping and forming experience
- Drawing-based production
- Tooling and sample preparation

Quality Approach

At Onursan, quality is not limited to final inspection. We manage quality throughout the entire production cycle, from material control and production preparation to dimensional checks, packaging and shipment. As an ISO 9001:2015 certified company by TÜV Austria, we focus on process discipline, consistency, traceability and continuous improvement. Our goal is to provide international customers with reliable parts, clear communication and stable manufacturing performance.

Our quality focus includes:

- Material suitability according to customer requirements
- Dimensional checks based on drawings and samples
- Stable and repeatable production processes
- Surface, edge and flatness control
- Fine blanking support for higher precision requirements
- Packaging and shipment care
- Continuous improvement based on customer feedback
